DECLARATION

I, **Harinder Mohan**, hereby confirm that the project report on "Electronic & Optical properties of MoS₂", which I submitted in partial fulfilment of the requirements for the M.Sc. degree in physics at the Department of Physics and Astronomical Sciences of Central University of Himachal Pradesh, Dharamshala, District Kangra (H.P.), is original work I completed under **Dr. Surender Pratap** guidance. In my submission, I have expressed my thoughts in my own words, and where I have used the thoughts or words of others, I have correctly and completely cited and acknowledged those original sources.

I further confirm that I have followed to the standards of academic honesty and integrity and that I have not falsified or distorted any information, including ideas, facts, or sources, in my work.

In order to meet the requirements for the Master of Science (Specialization in Theoretical Physics) degree, I have submitted this project work for the PAS548 course.

I further declare that this project is the result of my own work and that I have not submitted it to another university for the purpose of receiving a degree.

ABSTRACT

In this project we look at the problem of why we need seesaw model. The historical discovery of neutrino oscillations using solar and atmospheric neutrinos, and subsequent accelerator and reactor studies, has brought neutrino physics to the precision era. We note that CP effects in oscillation phenomena could be difficult to extract in the presence of unitarity violation. As a result upcoming dedicated leptonic CP violation studies should take into account the non-unitarity of the lepton mixing matrix. Restricting non-unitarity will shed light on the seesaw scale, and thereby guide us towards the new physics responsible for neutrino mass generation.
